US Citizen in Houston, TX

Education & Certificates

- B.S. in Computer Science, Minor in Cybersecurity, from University of Houston–Clear Lake, graduating May 2027, GPA 3.43
- CompTIA Security+, AWS Certified Solutions Architect Associate, Cisco Certified CyberOps Associate

Skills

- Technical: SQL, Bash, Java, Git, Linux, Windows, Wireshark, AWS (EC2, VPC, KMS), Microsoft Entra ID
- Security: incident response, vulnerability management, network security, encryption, RBAC, MFA, SSO

Projects

Cloud Detection Pipeline

- Built an AWS threat detection pipeline that collected CloudTrail logs, converted them to Parquet with Lambda, and ran six MITRE ATT&CK detections in Athena every 15 minutes so risky activity reached Slack within minutes.
- Automated attack simulation with Python, EventBridge, and DynamoDB to score detections daily, catching 2 of 2 simulated attacks with a 10 minute median time to detect.
- Deployed all infrastructure with Terraform through GitHub Actions using OIDC roles, approval gates, and 121 automated tests so no AWS keys were stored and only reviewed changes reached production.

AWS Hosted Portfolio Website

- Published an HTTPS portfolio with private S3, CloudFront Origin Access Control, and ACM TLS so the site was served securely without a public bucket.
- Automated uploads and cache invalidation with GitHub Actions and OIDC temporary credentials, removing the need for stored access keys.
- Diagnosed an AssumeRoleWithWebIdentity failure in CloudTrail and corrected the IAM trust policy, restoring keyless deployments.

AWS Cloud Security Lab

- Hardened S3 with Block Public Access, SSE-S3 encryption, and versioning, then verified least privilege IAM by testing uploads and deletes that returned AccessDenied.
- Configured CloudTrail delivery to a dedicated S3 bucket and investigated failed changes in event history to trace who attempted them.
- Checked external access with IAM Access Analyzer to find any resources shared outside the account.

Active Directory Security Monitoring with Splunk

- Built a VMware Active Directory lab and forwarded Windows event logs to Splunk to practice SIEM log analysis and threat detection.

- Tested a five attempt account lockout policy and identified the resulting Event ID 4740 record, confirming the policy worked.
- Developed Event ID 4625 searches, security dashboards, and five minute scheduled alerts with a 15 minute throttle, then verified the alerts triggered.

Work History

Call Center Manager at TTEC, Remote *Jul 2022 to Jul 2023*

- Led a remote call center team of 20+ employees who supported customers with technical and account issues.
- Coached employee performance and presented results in client facing KPI meetings to keep service goals on track.
- Resolved escalated customer and technical issues while enforcing HIPAA compliance to protect health information.

Customer Service Representative II at TTEC, Remote *Jan 2022 to Jul 2022*

- Supported customers with web, application, and account access issues in a high volume remote role.
- Handled 20 to 40+ cases daily involving web support and application issues to keep customers working.
- Performed password resets and restored account access so customers could sign in securely again.

Technical Support Intern at U-Connect Telecommunication Services *May 2021 to Aug 2021*

- Provided IT support for hardware, software, network, and application issues by phone, email, and ServiceNow.
- Performed account provisioning, access management, password resets, and security patching, documenting each incident to keep systems secure and auditable.
- Monitored system alerts and escalated phishing and unauthorized access threats to protect company accounts.
